

PSIcapture 7.7

Very Smart Data Capture & Extraction

You're already overwhelmed by documents and information. PSIsapture is the multi-tool we all need in our pockets. It's the on-ramp that allows you to use tools and programs you already have to make your workflow smooth and efficient. PSIsapture ingests your paperwork in any form, physical or digital, extracts the information accurately, and moves it to whatever type of electronic filing system you use.

Work the way you want with PS!capture

Secure. Scalable. High-Performance. Automatic.

The Capture in PS!capture

We often throw around the word capture—in fact, it's in the product name for a very good reason. "Capture" simply means bringing the items in for processing and extraction. We can intake documents and files with scanners, copiers, monitored folders, other databases and IMAP email folders. Our auto importing feature allows a no-touch solution without lifting a finger.

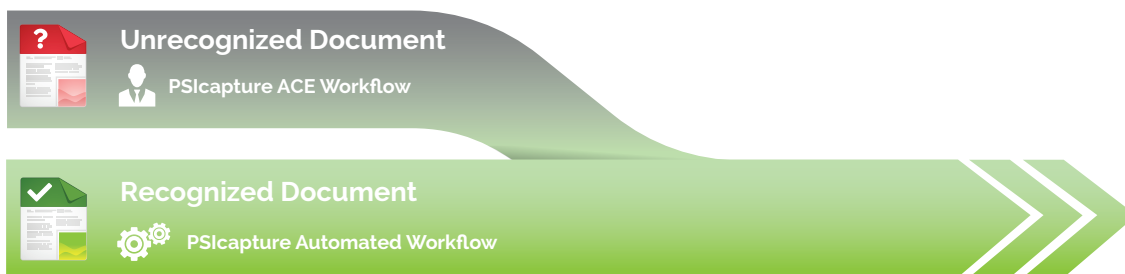

We want to help you work better with what you have without a lot of hassle. Whether your office is still using that old copier from the 1990s or you're so electronic you don't even have paper, we can be that connection between your systems without the trouble of learning new processes and cumbersome software suites. Don't have a system? We can help you build one was well.

Now that the source is imported and identified, we need to extract all the information you want at your fingertips rather than searching for hours.

Data, Data, Data

If we're honest with ourselves, it's really all about data. It's the new currency of the world. Once we've captured the source of the data, we can pull any information you want from it and check it against a database for verification. Our processors can read and extract information from handwriting, electronic type, metadata (like info attached to pictures), or even those tests/surveys with those little bubbles you have to fill in. Besides extracting the data from various documents, we can identify them for you.

Let's say you're a business with lots of forms. How are you gathering that information and determining which form goes where? PS!capture's Accelerated Classification Engine (ACE) is a cutting-edge automatic document identification feature that allows users to build Classification rules in the middle of a workflow without breaking stride.

Instead of configuring rules for Classification prior to running the workflow, ACE makes it possible for Knowledge Workers to import never-before-seen documents and simply verify the automatic Classification that ACE has completed during the workflow.

Taking it a step further, ACE can access existing sets of indexed information, find their location on the form and extract the data you are looking for. With ACE, users can simply validate the Classification and Data Extraction that ACE has intelligibly identified, reducing a process that once took hours to under a minute.

Work the way you want with PS!capture

Let Our Workflow Do the Work

Automation is a big deal to us. We want you to be able to focus on the important tasks and projects, not the tedious ones that are time consuming. With features like ACE and our Workflow setup, we can automate your processes so no one has to touch anything.

Part of our automation is our Workflow setup. The “workflow” determines the path we take your document(s) on. For example, one workflow can be to capture/import the document, perform OCR, identify the document/form, extract the information, pass it by Quality Assurance for verification, and migrate to basically anywhere. Once the workflow is setup, just let it go and we’ll take it from there. We’re here to help, not get in the way with more fiddly software.

With the ability to capture from a variety of sources and our powerful OCR, data extraction, and document identification there’s only one thing left to cover. Where do we want it to be filed?

Information Just Waiting to be Discovered.

Your documents are actionable business intelligence. Harness it with PS!capture.

Data Where You Need It.

Whether you’re capturing data for the first time or wanting to move documents from once spot to another, our software can get you there. With over 60+ ECM and file/folder types to choose from, integrating into your office ecosystem is easy. We can move files to ECMs like Microsoft SharePoint, DocuWare, and OnBase, just to name a few. Or if you just need it put into a folder on your company server, we can do that too. We can even email the documents to someone after processing for further follow-up.

By offering all these options, it allows us to better serve you where you’re at. If you are unsure where that is exactly, give us call and we’d be happy to help navigate this with you.

Sample PS!capture Workflow

Ingest raw data from almost any source.

Workstation

Server

OCR

Classify

Index

QA

Migrate

Your data, on tap.

Migrate to almost any EDM, HRIS, ECM, HCM or LOB system.

PSIcapture Selected Features

To companies needing more complex workflows, PSIcapture offers a number of features to enhance and accelerate important business data processing. These powerhouse features include:

Multi-Core OCR

Optical Character Recognition (OCR) allows a computer to read and recognize printed text at blinding speeds. This information is then employed to aid in converting images into PDF's, extracting indexing information automatically, and recognizing what type of document it is looking at. With our High-Performance OCR, you can pump up the volume and use up to 16 cores for OCR capability. What this means is, for high volume users under extreme deadlines, organizations can realize text reading boosts up to 12X normal when OCR is utilized in a workflow. Put simply, it could read and recognize the entire text of War and Peace in about 2 minutes. Presto!

Classification

Never again separate your documents before scanning them if you want. Most of the time, PSIcapture can be trained to automatically identify and separate documents, negating the need for pre-scan separation—a HUGE time waster! It is interesting to note that this is the most requested capability for Advanced Capture products, and we give it away for free.

eMail Capture

Companies can effortlessly have emails and their attachments automatically ingested, processed, and migrated to any number of final destinations. Super-simple to set up for administrators, and no end-user training required.

Table Extraction

Want your software to automatically identify rows and columns in documents; you know, the “stuff” about the “things” you ordered? We can teach PSIcapture to extract each row as an individual record and post it to any number of places, including a database or an accounting system for easier, faster processing. We can also push the individual index fields and images to other places, at the same time, as well. Bankers and Accountants...you're welcome!

PSIcapture Fusion

Our HTML5-friendly (Read: “Web-Browser-Neutral,”) team-driven Indexing and Quality Assurance solution. For really large teams of people needing to work together, or far-flung teams with assets on the go, this is a really great way to assure those documents get processed quickly and easily. Remember, there is no “i” in team, but there are 2 in PSIcapture Fusion.

Software & Hardware Requirements

About PSIGEN Software, Inc.

Unleash the power of your people by eliminating data entry with business automation technology from PSIGEN. Implemented by a global network of integrators, PSIGEN paves the way for your digital transformation in four steps: on-ramp your information from paper and email attachments with PSIcapture advanced capture software; automate workflows with PSIsafe document management software; integrate these documents so they are available and searchable in software you use daily (ERP, CRM, HCM); and make better decisions faster as a result – with a positive ROI faster than you may think. Work the way you want, let technology do the rest.
